LAB TASK 4

• Assign and print the roll number, phone number and address of two students having names "Babar" and "Danish" respectively by creating two objects of class 'Student'.

```
public class Main{
    public static void main(String[] args){
        class student{
            String name;
            int rollno;
            String address;
            String phonenumber;
        }
        student s1=new student();
        s1.name="Babar";
        s1.rollno=36567;
        s1.address="Karachi";
        s1.phonenumber="123456";

        student s2=new student();
        s2.name="Danish";
        s2.rollno=48789;
        s2.address="Islamabad";
        s2.phonenumber="345678";
        System.out.println("Student 1");
        System.out.println(" Name "+s1.name);
        System.out.println(" Roll no "+s1.rollno);
        System.out.println(" Address "+s1.address);
        System.out.println("  number "+s1.phonenumber);

        System.out.println("Student 2");
        System.out.println(" Name "+s2.name);
        System.out.println(" Roll no "+s2.rollno);
        System.out.println(" Address "+s2.address);
```

```
        System.out.println(" phonne number "+s2.phonenumber);

    }

}
```

```

- Add two distances in inch-feet by creating a class named 'AddDistance'.

```java
import java.util.Scanner;

class AddDistance {
    int feet, inches;

    void getData() {
        Scanner sc = new Scanner(System.in);
        System.out.print("Enter feet: ");
        feet = sc.nextInt();
        System.out.print("Enter inches: ");
        inches = sc.nextInt();
    }

    void addDistance(AddDistance d1, AddDistance d2) {
        inches = d1.inches + d2.inches;
```

```java
        feet = d1.feet + d2.feet;

        if (inches >= 12) {
            feet = feet + (inches / 12);
            inches = inches % 12;
        }
    }

    void display() {
        System.out.println("Total Distance = " + feet + " feet " + inches + "
inches");
    }

    public static void main(String[] args) {
        AddDistance d1 = new AddDistance();
        AddDistance d2 = new AddDistance();
        AddDistance result = new AddDistance();

        System.out.println("Enter First Distance:");
        d1.getData();

        System.out.println("Enter Second Distance:");
        d2.getData();

        result.addDistance(d1, d2);
        result.display();
```

```
    }
}
```

```

• Create a class Employ and add information of 5 employees like name,id,address and print all information.

```java
import java.util.Scanner;

class Employ {
    String name;
    int id;
    String address;

    void getData() {
        Scanner sc = new Scanner(System.in);

        System.out.print("Enter Name: ");
        name = sc.nextLine();

        System.out.print("Enter ID: ");
        id = sc.nextInt();
        sc.nextLine(); // consume leftover newline

        System.out.print("Enter Address: ");
        address = sc.nextLine();
    }
```

```java

    void display() {
        System.out.println("Name: " + name);
        System.out.println("ID: " + id);
        System.out.println("Address: " + address);
        System.out.println("------------------------");
```

```
    }

    public static void main(String[] args) {
        Employ emp[] = new Employ[5];

        for (int i = 0; i < 5; i++) {
            emp[i] = new Employ();
            System.out.println("Enter details for Employee " + (i + 1));
            emp[i].getData();
        }

        System.out.println("\nEmployee Details:");
        for (int i = 0; i < 5; i++) {
            emp[i].display();
        }
    }
}
```
